

### Mobile solutions

Just take your **ENGATOR** with you!  
Especially in remote locations, in the mountains, on a yacht or in a crisis area, is energy a rare commodity. The sturdy **ENGATOR** battery store system is a unified and secure complete solution that can be **fixed or mobile** installed / deployed.

### Store power for the middle class

Due to the **expandable and modular** construction, our energy store units are perfectly suited for use in medium-sized and large industrial companies.

Our **large store systems** enable a supply from 20 kWh up to multiple megawatt range.

### Home power plant at home

Save your regenerative generated solar and / or wind energy at **your own home power plant**. The modular store size ranges from 4.8 kWh to 100 kWh. The **EnergyStore** allows you to increase your own consumption of regenerative generated energy **up to 80%**. Our **EnergyStore** makes it possible.

### Individual store solutions. Perfectly tailored for your requirements.

Save your regenerative generated solar and / or wind energy at your own home power plant. The modular store size ranges from **4.8 kWh to 100 kWh**. Our product spectrum allows you to increase your own consumption of regenerative generated energy up to 80%. Therefore, you have found the ideal solution for energy optimization and the right path to independence. Our energy store systems enable a self-sufficient energy supply. Anyone who uses the generated solar or wind electricity themselves and does not feed into the grid can save a lot of power in the future and at the same time save their own independent energy supply.

**Save your self-sufficient energy supply now.**

So far, a solar system without energy store system covers only about 35% of their own electricity. Through our construction this value is greatly increased and because of that you are more independent of the energy supplier and their pricing policy!

- ✓ You want to use more solar power for yourself
- ✓ You want to consume the power if you need it
- ✓ You want independence from rising energy costs

### Great targets. Great solutions.

The power supply from large industrial plants or medium-sized companies making high demands to integrated an energy store. We support you in planning, implementation and realization of your large store. **At the same time you are steered against loss of production and network fluctuations in the event of a power failure.** We work purely with high quality and durable materials. Our systems pay off after just a few years. Consuming the power itself is often much more profitable than feeding it into the public grid.

In order to avoid high costs, the proportion of PV system and current store size must be right. Through a non-binding consultation, we calculate an individual and optimally coordinated solution for you. Let us advise you!

www.enerwit.de

- ✓ Steered against production downtime and network fluctuations
- ✓ Saves your regenerative generated solar and / or wind energy
- ✓ Use the solar power also at the weekend

WHERE ENERGY IS LUXURY

# ENGATOR

**When do you think about power?  
If the power falls and only until it returns?**

With the Engator the light does not go out even in remote places. Just take your Engator with you! Especially in remote locations, in the mountains, on a yacht or in a crisis area, is energy a rare commodity. Every kilowatt hour is pure luxury and the energy supply is conjunct with a lot of effort.

Mobile energy store as important components can lead the intelligent energy management to the target! These store systems (different versions) are always needed if the unlimited energy of the sun to be used. No matter what time of day or where.

Possible areas of application: mountain huts, holiday apartments (linca), exhibition stands, construction sites, caravans, sailboats, club houses, winter quarters, crisis areas, small islands, garden areas, party events, and much more.

### PV system cleaning XXL

Get your old power back! Is your PV system still working as the appliance? No? Then you give away the money! We have the solution ... **professional module cleaning with a robot!**

Often, impurities are barely discernible with the eye, as they settle at the edges first. There, begin the loss of power. As a plant operator, you can recognize a loss of revenue while comparing last year's billing from your network operator's. **Only clean solar modules guarantee high yields of your photovoltaic system.**

In addition, a professional module cleaning extends the expected life and thus safe your investment. Traditional cleaning methods are often inefficient and therefore costly. Above all PV systems with a roof pitch angle of less than 20 degrees as well as farms are affected.
